DIVISIONE ESTERO - RAYON EXPORT - EXPORT DIVISION
EXPORT-ABTEILUNG

Tutto ha avuto inizio verso il 1950, Antonio Lusi aveva 18 anni ed era in un piccolo locale a Fucecchio, iniziava a gettare le basi di un'attività completamente nuova per il comprensorio industriale del Val d'Arno: la lavorazione della lastra di cristallo per l'arredamento. Dominava in zona l'industria conciaria e calzaturiera e non esistevano maestranze qualificate per questo tipo di lavorazioni, le banche avevano scarsa fiducia in un'Azienda di carattere ancora artigianale e quindi con basso livello produttivo e una rete commerciale tutta da sviluppare. Antonio Lusi e le sue maestranze, che ormai si erano formate professionalmente, resistettero ai momenti difficili con caparbietà. Antonio era convinto che il tempo gli avrebbe dato ragione. Finalmente gli accessori in cristallo divennero di gran moda e si imposero sul mercato, Antonio capì subito che stava iniziando un trend positivo e senza perder tempo orientò immediatamente l'azienda verso la produzione dei primi specchi artistici, dei lampadari, delle appliques, delle mensole. La bellezza e la modernità del prodotto, unite ad una fabbricazione di alto livello e grande cura dei dettagli, imposero subito la Lusi sul mercato. Nacque velocemente il bisogno di ampliare la piccola Azienda. Nel frattempo Antonio aveva messo su famiglia, nell'ottobre del 1957 si era sposato con Mara ed erano nati i primi tre figli, Nello, Andrea e Patrizia: Sergio il più piccolo, nascerà un po' d'anni dopo.

Nel 1969 sorse l'attuale stabilimento, dotato dei macchinari più moderni e sofisticati per la lavorazione del cristallo, su una superficie di mezzo ettaro. Fu un passaggio, necessario e rischioso al tempo stesso, da una dimensione ancora artigianale a quella industriale: non era più sufficiente partecipare alle Fiere più importanti come quella di Bari, di Milano o di Parigi, occorreva creare mostre permanenti sia in Italia che all'estero, creare filiali e agenzie di rappresentanza, assumere personale qualificato, produrre di più e mantenere al tempo stesso qualità e caratteristiche artigianali del prodotto. Furono anni importanti, di grandi mutamenti, il prodotto si evolve, la Lusi copre negli anni '70 l'intera accessoria per il bagno, accappatoi compresi.

Negli anni '80, i figli entrano in Azienda, c'è una svolta decisa verso il design e la collaborazione con architetti, artisti e designer prestigiosi, la stanza da bagno cambia e la Lusi diventa Antonio Lusi in omaggio al fondatore, precorre i tempi e propone un nuovo modo di concepire il bagno. Una scelta vincente che la porterà, prima azienda italiana del settore a partecipare al Salone Internazionale del Mobile di Milano del 2000 nel padiglione dedicato al Design. La famiglia si è allargata, sono nati i nipoti, Jonathan, Silvia, Giorgia, Melissa, Aurora e Flavio.

Nel 2007 ad un anno dalla scomparsa di Antonio e di Mara, è stato rivisitato il logo aziendale citando la grafica del marchio originario, il 2008 ha visto l'inaugurazione dello showroom di Milano a cui sono seguiti in rapida successione Perth, Chicago, Vienna, Miami e Monaco, continuando una politica fatta di cura ed attenzione dei particolari, di proposte innovative, della introduzione di nuovi elementi nell'ambiente bagno, di estrema sartorialità, di ordini evasi con celerità e precisione. Grande attenzione viene posta anche a seguire l'evoluzione del design, sponsorizzando concorsi e manifestazioni dedicate ai giovani talenti e producendone i progetti più interessanti.

Everything started around the 1950's, Antonio Lusi was 18 years old and lived in a small town called Fucecchio where he began a completely new business for the industrial area of the Val D'Arno: working sheets of glass for furnishings. The area was predominantly a tannery and shoe industry so qualified craftsman for the type of workmanship needed didn't exist and banks were untrustworthy of such a new business not yet developed. Antonio Lusi and his workers, which had become professionals, resisted during the hard times with stubbornness. Antonio was convinced that time would give reason. Finally the glass accessories became a huge success and had their place on the market, Antonio realized he had started an important trend and immediately changed direction in his production towards artistic mirrors, lamps, sconces and shelves. The beauty and style of the product together with a detailed, high level production imposed Lusi on the market. The necessity to grow began. In the meantime Antonio married Mara in October of 1957 and the first three children were born, Nello, Andrea and Patrizia: Sergio, the youngest would be born a few years later.

In 1969 the current establishment emerged on a hectare of land, equipped with more modern and sophisticated machines to work glass. It was a necessary and risky move from artisans to industry: it wasn't enough to participate in the important trade shows like Bari, Milano or Paris, it was necessary to start creating permanent showrooms in Italy and abroad, create branch offices and representative agencies, hire qualified personnel, produce more while at the same time maintain the quality and characteristics of a handmade product. Those were important years, of great mutation, the product evolves and Lusi, in the '70's covers the entire gamma of bathroom accessories including bath robes.

In the '80's the children enter the business, there was a strong change towards design and collaboration with architects, artists and designers, the bathroom changes and Lusi becomes Antonio Lusi in honor of its founder, time goes on and a new conceptual proposal of the bathroom arises. A winning choice that takes the company to the top and to exhibit, in the year 2000, at the Salone del Mobile in Milan in the designer furniture pavilion. The family grows and the nieces and nephews are born, Jonathan, Silvia, Giorgia, Melissa, Aurora and Flavio.

In 2007 after a year had passed from the death of Antonio and Mara, the company logo was redesigned to remember the graphics used for the original trademark. In 2008 the Milan showroom was inaugurated after which Perth, Chicago, Vienna, Miami and Munich followed quickly, continuing the company politics of care and attention to details, new and innovative proposals, tailor made products and complete professionalism. The evolution of design is followed sponsoring contests and shows dedicated to young talent and producing their most interesting work.

Our wood burning thermo-heater fireplace is certified in compliance with the European Community directives, in relation to the emission of "fine particulate matter" in the atmosphere.

2011 Fine particulate matter emission not exceeding 2000ppm

2015 Fine particulate matter emission below 1250ppm minimum efficiency 75%

Attention, some European countries may require restrictions autonomously (Austria).

PUNTI DI FORZA TERMO CAMINI ANTONIO LUPI DESIGN

VERSATILITÀ DI INSTALLAZIONE:

Convezione naturale o forzata in estrazione - Applicando all'esterno della macchina un MANTELLO CONVETTIVO (opzionale) l'aria calda prodotta dal caminetto viene convogliata alle uscite poste nella parte superiore del mantello dove, mediante l'applicazione di tubi flessibili in alluminio, l'aria calda può essere distribuita nei vari locali. Tale distribuzione d'aria può essere a VENTILAZIONE NATURALE oppure a VENTILAZIONE FORZATA installando un estrattore di calore.

Accumulo radiante - Il caminetto viene rivestito di materiale refrattario che assorbe il calore rilasciandolo lentamente. Il riscaldamento radiante è più duraturo e di migliore qualità perché è un caldo naturale (tipo l'irraggiamento del sole).

STRUTTURA AD INCASTRI - la struttura dei termo camini oltre alle saldature è composta da particolari incastri che lo rinforzano ulteriormente .

RINFORZI RADIANTI - La struttura dei termo camini è rinforzata con lame d'acciaio che hanno lo scopo di aumentare lo scambio termico.

GIRO FUMI - il "giro fumi", posto nella cappa, è costruito con particolari piegature, sulla parte posteriore è rivestito in refrattario per un aumento di accumulo di calore.

ARIA PRIMARIA - posta sulla parte anteriore in alto della camera di combustione, immette l'aria che per prima alimenta la fiamma.

ARIA SECONDARIA - Posta sulla parte anteriore in alto della camera di combustione, immette l'aria che serve a mantenere il vetro pulito.

ARIA TERZARIA (Post combustione) - posta internamente sullo schienale della camera di combustione, ha 4 fori in basso per l'immissione dell'aria comburente posteriore alla fiamma e 14 fori al centro dello schienale per l'immissione dell'aria che va ad eliminare eventuali particelle incombustibili (post combustione).

ANTA A SCOMPARRSA CON MOVIMENTO CONTRAPPESO A CATENA.

GUIDE DI SCORRIMENTO DELL'ANTA, INCASSATE E NON A VISTA.

POSSIBILITÀ DI INSTALLAZIONE A TERRA.

ADVANTAGES OF HEATER-FIREPLACES ANTONIO LUPI DESIGN

VERSATILITY OF INSTALLATION:

Extraction by natural or forced convection - By applying a CONVECTIVE MANTLE (optional) to the outside of the unit, the hot air produced by the fireplace is conveyed to the outlets at the top of the mantle, from where it can be distributed to the various rooms through flexible aluminium pipes installed for the purpose. The air can be distributed by NATURAL VENTILATION or by FORCED VENTILATION installing a heat extractor.

Radiant storage - The fireplace is externally lined with refractory material that absorbs the heat and then gradually releases it. Radiant heating lasts longer and is of better quality because it is a form of natural heat (like solar radiation).

INTERLOCKING CONSTRUCTION - The structure of the heater-fireplace is welded together but also provided with interlocking joints for additional reinforcement.

RADIATING REINFORCEMENTS - The heater-fireplaces are reinforced with steel sections that increase the heat-exchange surface.

FLUE-GAS PASS - The flue-gas pass, located inside the hood, is designed with special bends and has a refractory rear lining to increase heat storage.

PRIMARY AIR - The primary air inlet is located at the upper front of the combustion chamber and lets in the air that feeds the flame.

SECONDARY AIR - The secondary air inlet is located at the upper front of the combustion chamber and lets in the air that keeps the glass clean.

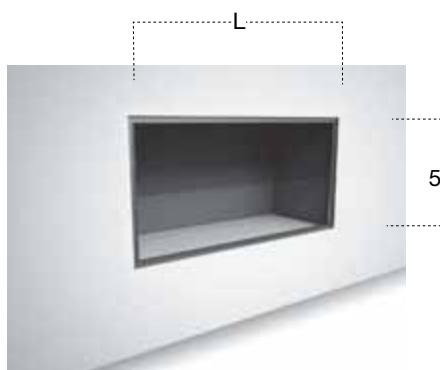

TERTIARY AIR (Post combustion) - Located inside the back of the combustion chamber, it has 4 holes at the bottom to let in combustion air behind the flame, and 14 holes at the centre of the back to let in air to remove any unburnt residues (post combustion).

SLIDE-AWAY DOOR OPERATED BY CHAIN-CONNECTED COUNTERWEIGHT.

RECESSED DOOR GUIDEWAYS (NOT VISIBLE).

CAN ALSO BE INSTALLED ON THE FLOOR
